

How green are you?

Environment is everything around us. Everyone knows, we have to protect it. Are we doing it right?

Firstly, we know a lot of environmental problems. One of them is air pollution. We can walk or cycle instead of driving a car. Deforestation is next dangerous problem. Trees produce oxygen, so we shouldn't cut them. Next problem, I am going to mention is oil spill. It causes water contamination. Furthermore, extinction of water animals.

Next, global warming is one of the most dangerous environmental problems. It is because of exhaust fumes. What's more, they cause ozone hole, too. Its consequences are rise of the average temperature and melting of ice cap, which can lead do floods.

People always say, that they protect our environment. Only few of them really do it. I tell you a truth. For our planet I do only one thing – recycling.

At the end, I have some ideas to better environment. We should take shorter showers to save water. To save energy we should turn the lights, computer and TV off when we don't use it. Recycling is important too. There won't be garbage in the streets. Moreover, it is really helpful for our planet.

All of us should do for our environment everything we can. Then it will be better life on our planet.
